

## Essential Utilities Strengthens America's Infrastructure Through \$1B+ Capital Improvement Program

April 10, 2025

*The company invested \$1.3 billion in 2024 with \$7.8 billion projected through 2029, addressing critical infrastructure needs highlighted in the American Society of Civil Engineers' 2025 Report Card*

BRYN MAWR, Pa.--(BUSINESS WIRE)--Apr. 10, 2025-- As the American Society of Civil Engineers (ASCE) releases its [2025 Report Card for America's Infrastructure](#), highlighting the urgent need for sustained nationwide investment, Essential Utilities (NYSE: WTRG) reinforces its commitment to addressing infrastructure challenges. Through its billion-dollar capital improvement program, Essential is modernizing water and natural gas infrastructure across its nine-state footprint, ensuring safer, more resilient communities.

"The ASCE's 2025 report underscores what we have long recognized—our nation's infrastructure requires urgent, sustained investment," said Christopher Franklin, Chairman and CEO of Essential Utilities. "As one of the nation's largest water, wastewater, and natural gas providers, Essential has both a duty and a commitment to address this need – particularly in aging systems across our communities. Over the past five years, we have actively invested in vital infrastructure to ensure the safety, reliability and sustainability of essential services for generations to come. We will continue to be part of the solution with thoughtful, ongoing capital investment over the next five years."

Since 2020, Essential has invested more than \$5.4 billion toward critical infrastructure projects. In 2024 alone, the company invested over \$1.3 billion in long-term improvements, including:

- Replacing over 1,600 lead and galvanized water service lines, enhancing water quality and safety.
- Modernizing nearly 410 miles of aging water, wastewater and natural gas pipelines to improve reliability and reduce safety risks.
- Investing \$4 million to replace 450 customer-owned lead service lines in Chester County, Pennsylvania, at no direct cost to homeowners.
- Upgrading the Manakin Farms Wastewater Treatment Facility in Goochland County, Virginia to reduce landfill sludge and improve environmental sustainability.
- Constructing a new 500,000-gallon water tower in Beau Rivage, North Carolina, to enhance water pressure and reliability for residents.

The report addresses hazardous waste concerns, highlighting contaminants like PFAS chemicals and lead, which received a 'C' grading, calling for ongoing investments in treatment systems and new technologies to protect public health. Additionally, the report graded the nation's aging and underfunded drinking water infrastructure as a "C-" and wastewater infrastructure as a "D+," urging continuous investment to address contaminants and meet evolving regulations as systems age.

Essential's water utility has proactively tested for PFAS in drinking water since 2017 and continues to implement advanced treatment technologies. In 2024, Essential invested \$27 million in PFAS mitigation, seeking low-interest grants and loans to minimize financial impact on customers. In addition, the company allocated \$23 million to lead service line remediation and replaced more than 1,600 lead or galvanized service lines to safeguard public health.

The energy sector received a grade of D+, citing the urgent need for investment to meet soaring energy demand, driven by the rise of data centers and net-zero goals. As part of its commitment to modernizing critical infrastructure, Essential continues to invest significantly to upgrade the energy infrastructure under its purview while supporting innovative efforts to meet growing demand. Natural gas plays a vital role in accommodating today's energy needs, providing a reliable, scalable solution to support resilience during peak demand periods.

The ASCE projects a \$3.7 trillion gap between current infrastructure investment plans and the funding needed to upgrade existing systems, highlighting the urgent need to address decades of underinvestment and build more resilient, sustainable systems.

Looking ahead, Essential plans to invest more than \$1.4 billion in 2025 and a projected \$7.8 billion through 2029, tackling critical infrastructure challenges while preparing for future needs. These investments will directly improve service reliability, protect public health and ensure compliance with evolving regulatory standards.

The quadrennial ASCE Report Card for America's Infrastructure assesses the nation's infrastructure and assigns grades based on condition and investment needs. Essential Utilities remains at the forefront of modernizing America's essential services, strengthening safe and resilient communities for generations to come.
